January 7, 2026

To the Admissions Committee,

I am pleased to write this letter of recommendation for Hassen Jebri, who was my student in Numerical Analysis and Scientific Computing during the 2022–2023 academic year at ESPRIT. Having taught for several years, I can confidently say that Hassen Jebri is among the most capable and dedicated students I have had the pleasure of teaching.

During our time together, Hassen consistently excelled academically and demonstrated a genuine enthusiasm for learning. In my course, he actively participated in problem-solving sessions, asked thoughtful questions, and approached complex numerical methods with both analytical rigor and creative thinking. One project that particularly stands out was his work on polynomial interpolation and numerical integration techniques, which demonstrated his strong understanding of approximation theory and his ability to apply these methods to solve real-world problems independently.

Beyond academic performance, Hassen possesses qualities that are essential for success in university studies. He is mature, responsible, and highly organized in managing coursework and deadlines. His interpersonal skills are excellent – he works well both independently and collaboratively with peers, often helping classmates understand difficult concepts and showing respect for diverse problem-solving approaches.

I am particularly impressed by Hassen's strong analytical abilities and persistence when facing challenging material. He never gives up on difficult problems and demonstrates the kind of mathematical maturity that will serve him well in advanced studies. I have no doubt that he possesses the academic preparation, adaptability, and personal maturity needed to thrive in a rigorous university setting.

Hassen Jebri has my strongest recommendation. He will be an asset to your academic community and I am confident he will make significant contributions to any program he undertakes.

Should you require any additional information, please do not hesitate to contact me.

Sincerely,

Wajih Mbarki

Mathematics Instructor
